ESR 3.3 → 3.3.02: patch notes vs game files

Compares d6f5996c (2026-11-07) with 4237a009 (2026-11-08) of the ESR repository

Each line of patchnotes/3.3.02.md checked against what changed in the ESR repository since 3.3. 3.3.01 has no patch note of its own, so anything it changed is included here too.

Confirmed **13** the files show this change

Partly **4** the files show a change, but not all of what the note says

Not checkable **3** lives in plugin binaries or the game client, or the note cannot be read

Patch notes, line by line

Bug Fixes

Verdict	Patch note says	Files show
Confirmed	Fixed a bug where elemental dragon stoning recipe required a forging hammer instead of a void shard.	cubemain.txt rows 17524-17532: the second input changes from the Forging Hammer (hh2) to the Void Shard (vvv).
Partly	Fixed a bug where characters started with a -1% resistance penalty.	difficultylevels.txt: Normal ResistPenalty and ResistPenaltyNonExpansion go from 1 to 0. The file value was +1, so the sign differs from the note's -1%.
Partly	Added a bunch of missing in-game wiki files.	21 pages under d2rloader/plugins/esr-wiki-overlay changed (quality_affixes +9,522 lines, special_crafting_outcomes +5,209, suffixes +3,157). No new file was added.
Confirmed	Fixed a tyrael might recipe being repeatable.	cubemain.txt row 2323 ("enr to vit") gains the item_upgraded condition the other 11 rows already had.
Confirmed	Fixed a bug where elixir of reincarnation was not craftable.	cubemain.txt new row 2311: 5 Dragon Stones make the elixir (35p), gated by the perk alchemy_13.
Not checkable	Hovering over physical and magic resists	The sentence is unfinished in patchnotes/3.3.02.md, so there is no stated change to look for.
Confirmed	Fixed a bug where alien artefacts could drop for anyone.	treasureclassex.txt row 725 (Artefacts) gains the condition stat('archaeology_15'.accr)>0.
Confirmed	Fixed hireling panel being broken.	hirelinginventorypanelhd.json changed (+72 -67 lines) and hirelingpanel_esr.sprite is new.
Confirmed	Fixed a bug where unique small and grand charms could not be socketed with perfect form.	misc.txt: gemsockets 0 to 1 on Small Charm (cm1) and Grand Charm (cm3).
Confirmed	Fixed a bug where rings and amulets socketed with sanctified jewels could not be sanctified (and rings or amulets already sanctified with a sanctified jewel instead could be sanctified again).	New stat item_sanctification_jewelry (1057) and property sanctified-jewelry. The 434 amulet and ring outcome rows in cubemain.txt set it instead of item_sanctification, and the "already sanctified" checks read it.
Partly	Fixed whirlwind proccing 3 times more melee attack procs than intended.	celestialrayone.whirlwind.toml adds hits_per_attack = 3. The whirlwind plugin DLL is byte-identical in both revisions, so the files do not show a behaviour change.
Not checkable	Fixed whirlwind crashing in rare cases.	The whirlwind plugin DLL is byte-identical in both revisions. A fix could sit in another binary.

Verdict	Patch note says	Files show
Not checkable	Fixed a bug where jewels that gained mod through cube recipes (other than recipes that returned the same jewel back) couldn't have their mods doubled by brilliant quality perk.	No table row points to it. The blacksmith and specializations plugin DLLs changed, and they are binaries.

Elixirs

Verdict	Patch note says	Files show
Partly	Reduced drop chances by 2.5 - 5 times (more reduction at higher levels).	treasureclassex.txt: elixir chance per potion drop goes from 1/1/2/3/3/4/5/5% to 0.5/0.5/0.6/0.7/0.7/0.8/1/1% (Normal Acts 1-5, Nightmare, Hell, endgame maps). That is 2 to 5 times; Normal Acts 1 and 2 are 2 times, below the stated 2.5.

Monsters

Verdict	Patch note says	Files show
Confirmed	Diablo - Reduced lightning inferno damage by 50%.	skills.txt DiabLight: HitShift 8 to 7, which halves the damage.
Confirmed	Radament - Halved defense in normal.	monstats.txt radament: AC (Normal) 252 to 125.

Specializations

Verdict	Patch note says	Files show
Confirmed	Alchemist: Unstable Mixtures - Reduced chance from 15% to 10%.	treasureclassex.txt Rejuvenation Regular and Full: 15 of 100 to 10 of 100. The perk string says 10%.
Confirmed	Alchemist: Transmutation - Reduced chance from 50% to 25%.	treasureclassex.txt Healing and Mana Potions 1-8: 12 of 24 to 4 of 16. The perk string says 25%.

Stash

Verdict	Patch note says	Files show
Confirmed	Added all elixirs and mystical shards to the currency tab.	misc.txt: AdvancedStashStackable set on elixirs 01p-35p and the Mystical Shard (u42). The stash layout and currency tab sprites changed.

Weapon Swap Improvements

Verdict	Patch note says	Files show
Confirmed	Now when trying to do a weapon swap while the character is in mid animation, the swap is queued and performed after the current animation finishes. Previously, the swap performed during an animation would get dropped completely, which meant you had to wait for an animation to finish and time the key press.	New plugin d2rl-celestialrayone-weapon-swap-queue.dll with celestialrayone.weapon-swap-queue.toml, whose comments describe this behaviour.

Changed in the files, not in the patch notes

Change	Evidence	Player-visible
Gold Scarab runeword: the two jewel rows drop from +50% to +25%, so all 7 rows now read +25%.	runes.txt rows 1149-1150 (Runeword967, T1Min2 / T1Max2 quantity 50 to 25).	Yes

Change	Evidence	Player-visible
Starter Weapon (Melee and Caster) Paladin cube rows swap a mod between mana and attack speed.	cubemain.txt rows 13704-13705.	Yes
Act 1 - Wilderness 2 gets more monster types.	levels.txt: NumMon 1 to 6.	Yes
Two missiles get a client function (stuckarrow, footprint).	missiles.txt rows 85-86: pCltDoFunc empty to 1. Client-side only.	No
New settings file for the bad item log crash fix (hireling items). The plugin itself did not change.	celestialrayone.bad-item-log-fix.toml is new; its DLL is byte-identical.	No

Official pages behind the files

- `docs/specializations.htm`: still says Transmutation 50% and Unstable Mixtures 15%; the files and in-game strings say 25% and 10%.
- `docs/runewords.htm`: Gold Scarab rows 2 and 3 still show +50%; runes.txt says +25%.
- `docs/Eastern Sun Resurrected Cube Recipes.html`: does not list the new Elixir of Reincarnation recipe.

Files changed

Game table	Rows	Added	Removed	Changed
cubemain.txt	23693 → 23694	+1	–0	~449
difficultylevels.txt	3 → 3	+0	–0	~1
itemstatcost.txt	1057 → 1058	+1	–0	~0
levels.txt	216 → 216	+0	–0	~1
misc.txt	1247 → 1247	+0	–0	~43
missiles.txt	4123 → 4123	+0	–0	~2
monstats.txt	1443 → 1443	+0	–0	~1
properties.txt	804 → 805	+1	–0	~0
runes.txt	1243 → 1243	+0	–0	~2
skills.txt	1628 → 1628	+0	–0	~1
treasureclassex.txt	4225 → 4225	+0	–0	~19

Changed strings (English)

- `SpecializationsAlchemist1_3Desc`: Healing and mana potions have a 50% chance to drop as rejuvenation potions instead. → Healing and mana potions have a 25% chance to drop as rejuvenation potions instead.
- `SpecializationsAlchemist2_2Desc`: Rejuvenation potions have a 15% chance to drop as a random utility potion instead. → Rejuvenation potions have a 10% chance to drop as a random utility potion instead.

Launcher

- `d2rloader/config/celestialrayone.bad-item-log-fix.toml` (new)
- `d2rloader/config/celestialrayone.weapon-swap-queue.toml` (new)
- `d2rloader/config/celestialrayone.whirlwind.toml` (changed)
- `d2rloader/metadata.json` (changed)
- `d2rloader/plugins/d2rl-celestialrayone-blacksmith.dll` (changed)
- `d2rloader/plugins/d2rl-celestialrayone-specializations.dll` (changed)
- `d2rloader/plugins/d2rl-celestialrayone-weapon-swap-queue.dll` (new)
- 21 in-game wiki pages changed (`d2rloader/plugins/esr-wiki-overlay`)

Not checked

- Nothing here was tested in game. Verdicts come from the game tables, strings, launcher configs and file hashes.
- The blacksmith and specializations plugin DLLs changed, but binaries were not inspected, so they may carry changes this report cannot attribute.
