ESR 3.3.03 → 3.3.04: patch notes vs game files

Compares 927fdd82 (2026-11-09) with 89271182 (2026-11-11) of the ESR repository

ESR 3.3.04 compared with 3.3.03 (clone 927fdd82 → 89271182, tag 3.3.04): every patch-note line checked against the game tables, strings, launcher configs and patches. Plugin binaries are only compared by file change; nothing was tested in game.

Confirmed **15** the files show this change

Partly **3** the files show a change, but not all of what the note says

Not checkable **2** lives in plugin binaries or the game client, or the note cannot be read

Patch notes, line by line

Bug Fixes

Verdict	Patch note says	Files show
Confirmed	Fixed a bug where alien artefacts could not be deposited in the currency tab.	misc.txt: Alien Artefact 1–5 gained AdvancedStashStackable = 1 (the *stash tab comment column says "materials").
Confirmed	Fixed a bug where repairing all items could result in an error for good this time. As a side effect, repair cost displayed might be off in rare cases by a small margin (game always takes the server repair cost now).	New patch d2rloader/patches/server-priced-repairs.json (3 byte patches: Repair All, one item with enough gold, one item with too little gold): the gold taken is always the server's price; its description says the displayed cost can be off. d2rl-celestialrayone-blacksmith.dll also changed.
Partly	Fixed a critical bug where most items that granted x% physical damage as ele damage were not working at all (e.g. Voidforge).	skills.txt: the aura formulas of Voidforge, Icing Death, Earthshifter, Gargoyle's Bite and Doomfletch's Prism raise the damage-bonus floor from max(-90, …) to max(0, …) in calc3/calc4; Gargoyle Bite Aura now reads item_throw_mindamage / item_throw_maxdamage (calc5/calc6) and lost the blacksmithing_1 factor in aurastatcalc3. Why these rows did not work at all before cannot be read from the files.
Confirmed	Fixed a bug where Ironbolt was getting twice the intended life on striking.	skills.txt Ironbolt Ascendancy (the tier 3 aura): aurastat4 lifeonstriking = strength/200 removed; Ironbolt Ascendancy Tier 4 keeps strength/200, so life on striking is granted once.
Confirmed	Fixed a bug where life pact drained twice the amount of life intended.	skills.txt: the Life Pact drain (hpregen –1% of maximum life while above 20% life with lifepactactive) was both in the Lifebreaker Ascendancy passive (passivestat3) and in Lifebreaker Ascendancy Tier 4 (aurastat3); 3.3.04 keeps only the passive one (now passivestat1).
Confirmed	Fixed a bug where Ravens would not attack until a point in thunderclaws was learned.	skills.txt Raven: sumsk1calc skill('Thunderclaws'.lvl) → skill('Thunderclaws'.lvl)+1, so the Ravens' attack skill has level 1 without points in Thunderclaws.
Not checkable	Fixed a bug where Ravens' default damage was not taken into consideration.	No table change for the Ravens' damage; d2rl-celestialrayone-summon-enhancements.dll changed (binary).

Verdict	Patch note says	Files show
Confirmed	Fixed a bug where levitation mastery oskill (or any other passive mastery) would break auras for a very short period of time.	d2rloader/config/celestialrayone.left-click-auras.toml: new option item_refresh_keeps_auras = true; its comment describes the equipment re-check that switched item auras off and on, with Divinity + Levitation Mastery as the looping case. d2rl-celestialrayone-left-click-auras.dll changed.
Partly	Fixed a bug where certain blacksmith nodes would bug out certain runeworded weapons.	d2rl-celestialrayone-blacksmith.dll changed (binary). skills.txt: Famine, Dreamflange, Agent of the Light and Barbaric Devastator auras now multiply by ((blacksmithing_1)?11:10) and/or ((blacksmithing_9)?11:10) with no division back by 10 or 100 (Voidforge and Gargoyle's Bite do divide). Read literally that is 10× (100× for Dreamflange and two Agent of the Light lines) the 3.3.03 values; possibly a slip, not tested.
Not checkable	Fixed a display bug where a bound monster wouldn't list its aura in the monster display description.	d2rl-celestialrayone-monster-display.dll changed (binary); no table change.

Monsters

Verdict	Patch note says	Files show
Confirmed	Diablo - Significantly reduced the damage of his lightning inferno. Reduced the damage of his fire nova by ~33%. Increased firestorm damage by ~100%.	skills.txt: DiabLight HitShift 7 → 6 (half) and EMax 10 → 5, missiles.txt diablight NextHit '' → 1, NextDelay 3 → 1; DiabFire EMin/EMax 10–15 → 5–10 (max –33%, average –40%); DiabWall HitShift 5 → 6 (×2).
Confirmed	Andariel - Reduced her poison damage. The physical part of her poison skills no longer scales exponentially with levels.	skills.txt AndyPoisonBolt: the exponential DmgSymPerCalc (ulvl² × (ulvl+50) …) removed and replaced by flat MinLevDam 1 / MaxLevDam 2 per level; EMin/EMax 1–2 → 2–3 with HitShift 7 → 6 (average poison 192 → 160 in 256ths per level step).

Items

Verdict	Patch note says	Files show
Confirmed	Reworked a few more unique items, added a few new cool skills.	uniqueitems.txt: 32 rows changed (31 unique weapons, Steel of Legends); new skills.txt rows Warshrike, Pounce, Stormseeker, Stormseeker Lightning, Morgue Buff, Battle Hymn Buff, The Scalper Buff, Dark Knight Dread Passive (+3 skilldesc, +11 missiles, +5 states, +10 itemstatcost).

Ascendancies

Verdict	Patch note says	Files show
Confirmed	Removed ascendancy stones from the game.	cubemain.txt: all 1,859 ascendancy rows removed (15 stone recipes × 8 classes, tier 2–5 transmutes, 150 Primordial Soulstone captures, Lich King, traps); propertygroups.txt –32 tier groups; properties.txt –ascendancy-upgrade, –ascendancy-tier-4-count(-new). The stone item (ast) and its 15 uniqueitems.txt rows remain for the login conversion.

Verdict	Patch note says	Files show
Confirmed	Moved the entire ascendancy system in a new UI panel that can be accessed by clicking the button near the specializations (character sheet) once you unlock ascendancies.	New d2rl-celestialrayone-ascendancies.dll and celestialrayone.ascendancies.toml (15 ascendancies in window order with tier1–tier5 properties); new UI sprites under hd/global/ui/ascendancies and panel/ascendancies; characterstatspanelhd.json and hudpanelhd.json gained the button and notice; 94+ new Ascendancy UI strings.
Confirmed	The orb of creation is now a consumable that unlocks the ascendancy panel.	misc.txt Orb of Creation: useable 0 → 1, pSpell 4, stat1 ascendancy_orb = 1, UsageConditionCalc stat('ascendancy_orb'.accr)<1. The 5 Orbs of Elements recipe is kept.
Confirmed	All boss kills now work off the plugin directly (based on d2rloader sdk). The kill credit should now be significantly more reliable and never fail. The kills are credited to everyone in the area of the boss. This includes kills for kill ledger bonuses and the rathma charm.	celestialrayone.ascendancies.toml [[kill_credit]]: 18 entries with the same kill values as the removed monprop.txt death-skill curses (24 monprop rows lost their death-skill); every living player in the dead monster's level gets kill_check for kill_credit_frames = 1500 (60 s). Tier triggers ([[trigger]]) credit Nihlathak, Uber Tristram, tier 5 bosses and the Lich King the same way.
Confirmed	Entering a character that already has an ascendancy stone will instantly destroy that stone and automatically ascend that character to the intended tier (the ascendancy is transferred to the panel).	celestialrayone.ascendancies.toml: legacy_stone_item = "ast" and legacy_tier_stats [676, 677, 678, 680] plus the soulstone and Lich King stats are read once to set the new saved stats ascendancy / ascendancy_progress / ascendancy_soulstones (itemstatcost.txt rows 1064–1067).
Confirmed	Changed the lich king bonus. No longer grants 1 to all skills. Instead, it now grants 10% bonus effect to the special tier 3 and 4 bonuses.	celestialrayone.ascendancies.toml lich_king = ["lich-king-bonus=1"]; 29 skills.txt ascendancy aura formulas now multiply by (100 + lichkingbonus × 10) / 100. The old Null Rune cube row (+1 to all skills) is gone.

Warlock

Verdict	Patch note says	Files show
Partly	Bind Monster - Reduced damage by ~50%. Swapping a permanent consume effect book to another book with a similar effect (e.g. ars'tor-baalos to ars'al-diabolos) will make the previous consume effect expire instantly. You will not be able to bind multiple prime evils anymore.	skills.txt Bind Demon: passivecalc10 ln43²/10 → ln43²/15 and passivecalc11 ln43²/50 → ln43²/75, i.e. –33%, not ~50%. Book swapping and the one-prime-evil rule: celestialrayone.forever-states.toml rules became triples ([691, 527, 528] …) and d2rl-celestialrayone-forever-states.dll changed; behaviour not checkable from the files.

Changed in the files, not in the patch notes

Change	Evidence	Player-visible
Battlemage ascendancy tier 3 no longer counts the weapon-mastery critical stats toward its spell damage	skills.txt Battlemage Ascendancy: (CB + DS + melee mastery crit + throwing mastery crit) / 2 → (CB + DS) / 2	Yes
Bloodmage ascendancy tier 3: summon damage needs 400 life per 1% instead of 375	skills.txt Bloodmage Ascendancy formula and string bloodmagetierone 375 → 400 (the docs page already said 400)	Yes

Change	Evidence	Player-visible
Soul Warden tier 4 lost +1% maximum magic and poison resist	old propertygroups.txt tier 4 group had max-magic-pois-res = 1; the ascendancies.toml tier4 list does not	Yes
Stance Dancer tier 4 lost its hidden aura	old tier 4 group had aura-hidden[1520] (Stance Dancer Ascendancy Tier 4); the toml tier4 list does not, while the page still promises +25% to all stance bonuses	Yes
Mana Warden tier 5 now grants +75% poison resist	toml tier5 adds res-pois = 75; the old recipe did not grant it (the docs page listed it)	Yes
Primordial Soulstones may keep dropping after ten	treasureclassex.txt (unchanged) still gates them on stat ascendancy_tier_4_count_new (919) < 10, the old stone counter; the panel counts ascendancy_soulstones (1066)	Yes
Hatchet Flurry reads a skill that does not exist	skills.txt Hatchet Flurry desc formula reads skill('Lumberjack Passive'); new stat hatchetflurryaxebonus (1061, +1–2 axes on The Lumberjack's Toy) is read by no formula	Yes
Flask of Renewal and Nirvana Grass go to the belt automatically	misc.txt autobelt 0 → 1	Yes
Standard of Heroes sounds	misc.txt dropsound/usesound item_charm → item_lightarmor	No
New magic suffix "of Skill Master"	magicsuffix.txt +1 row	Yes
Auto-waypoint plugin removed	d2rloader/plugins/d2rl-auto-waypoint.dll deleted; auto-waypoint.toml left behind	Yes
Charge string reworded	skills.json chargespeed "Charge Speed Bonus: %+d%%" → "Speed Bonus: %+d%%"	Yes
Bleed durations shown without trailing zeros	the docs pages now fill the bleed line (length ÷ 25 seconds, e.g. "over 0.12 seconds"); d2rl-celestialrayone-bleed-damage.dll changed	Yes

Official pages behind the files

- `ascendancies.htm (in-game wiki overlay)`: d2rloader/plugins/esr-wiki-overlay ships the old ascendancies page (only its .meta changed); docs/ascendancies.htm itself is the new one.
- `ascendancies.htm`: Stance Dancer tier 4 still says bonuses from all stances +25%, which the toml no longer grants through the hidden aura.
- `endgame_maps.htm`: The same 30 map-boss reward differences from the files as at 3.3.03; only the Lich King sentence was reworded.
- `kill_ledger.htm`: Unchanged: still "Lucion Whisper" / "Fallen Ancient Angel" (files: Lucion's Whisper / Ancient Fallen Angel) and Flawed Tourmaline on the Eternal Ancients row (files: Flawed Tainted Tourmaline).

Files changed

Game table	Rows	Added	Removed	Changed

- `d2rloader/plugins/d2rl-celestialrayone-summon-enhancements.dll` (changed)
- 7 in-game wiki pages changed (`d2rloader/plugins/esr-wiki-overlay`)

Not checked

- Nothing was tested in game.
- Plugin binaries (ascendancies, archaeology, blacksmith, bleed-damage, forever-states, left-click-auras, monster-display, specializations, summon-enhancements) are only compared by file change; their behaviour is not checkable from the files.
- How ranged ascendancy properties (e.g. dmg-norm=40..50) roll in the plugin.
- Whether the ascendancies.toml bonus_state = 697 (states.txt row 697 is thescalper; ascendancy is 698) is a slip.
