ESR 3.3.02 → 3.3.03: patch notes vs game files

Compares 4237a009 (2026-11-08) with 927fdd82 (2026-11-09) of the ESR repository

Each line of the ESR 3.3.03 patch notes compared with the file changes between 3.3.02 (4237a009) and 3.3.03 (927fdd82). Based on the files only: nothing here was tested in game.

Confirmed **14** the files show this change

Partly **2** the files show a change, but not all of what the note says

Not checkable **5** lives in plugin binaries or the game client, or the note cannot be read

Patch notes, line by line

Bug Fixes

Verdict	Patch note says	Files show
Partly	Fixed a crash and projectile bug with unravelers.	The projectile part shows in the files: skills.txt UnHolyBolt (the skill of unraveler1-8 in monstats.txt) changes srvdofunc 85 → blank and moves unholybolt1 from srvmissilea to srvmissile; missiles.txt unholybolt1-4 change hit functions (server 20 → 29, client 25 → 30), and a row unholyboltchainbolt is added. Whether the crash is gone cannot be read from the files.
Not checkable	Fixed a bug with monsters rolling invalid auras.	d2rl-celestialrayone-monster-affixes.dll changed (74,752 → 80,896 bytes), so the fix may live in the plugin. skills.txt gives 10 monster aura rows (Defiance Mon, Blessed Aim Mon, Sanctuary Mon, Cleansing Mon, Might Mon, Concentration Mon, Vigor Mon, Fanaticism Mon, Conviction Mon, Salvation Mon) a skilldesc value that was blank. The link between that and the invalid auras is not provable from the files.
Not checkable	Binding certain bosses should now roll a random aura properly and not just blessed aim.	No table row names this behaviour. Plugin binaries changed: monster-affixes (74,752 → 80,896 bytes) and summon-enhancements (124,416 → 126,464 bytes).
Confirmed	Fixed a bug where magic items could not be corrupted.	cubemain.txt: the corruption roll rows now take weap,nru / armo,nru / ring,nru / amul,nru / misl,nru with no quality, so every quality except runewords qualifies. At 3.3.02 no corruption row took a magic (mag) item.
Partly	Fixed a bug with certain gear slots getting the same corruptions every time.	cubemain.txt: every slot now rolls item_corrupted_dummy within 1-40 or 1-32. At 3.3.02 the ranges were offset per slot and reached 336, while itemstatcost.txt gives that stat 8 Save Bits (rolls of 256 or more do not fit). This is consistent with the note; the cause of the repeats is an inference. The "Corruption Legacy Roll - <Slot>" rows convert old in-flight values.
Not checkable	Fixed a bug with rings of power and my precious jeweler perks making some stats loop to infinity.	d2rl-celestialrayone-jeweler.dll changed (191,488 → 192,000 bytes) and a new plugin op-1-item-fix was added (celestialrayone.op1-item-fix.toml describes Jeweler perk bonuses on items not reaching the character). No table shows the looping itself.

Verdict	Patch note says	Files show
Confirmed	Fixed a bug where the experience bar showed as full past 2^31 experience points.	New d2rloader/patches/experience-bar-fill-fix.json: "Fixes the character sheet experience bar showing full once the next-level experience total reaches 2,147,483,648 or more" (signed comparison changed).
Confirmed	Fixed a bug where a socketed deviant cell charm could not be upgraded with standard of heroes.	cubemain.txt "Standard of Heroes Deviant Cell": input changes from Deviant Cell to "Deviant Cell,upg".
Not checkable	Fixed a bug where repairing equipment sometimes did not work with an error message.	No table row names repair. Plugin binaries changed, among them blacksmith (135,168 → 155,136 bytes) and bad-item-log-crash-fix (same size, different bytes). Not tested in game.
Confirmed	Fixed an issue where Sa rune did not rune forge the right bonuses.	cubemain.txt: new Sa rune forging rows for gloves (dmg-mag 25-60; gloves used to fall through to the armor row red-mag 10) and for wand, staff and orb. Wand, staff and gloves forging goes from 44 to 45 rune kinds.
Confirmed	Fixed a few monsters not dropping the right items.	monstats.txt: rathmaacolyte, horazondisciple, uldyssianhound, inariusstalker and malthaelimp now use "Guardian Champ Artefact" treasure classes; 13 clone rows drop TreasureClassDesecrated(H). treasureclassex.txt adds 30 rows ("Andariel Loot" and the like) and changes 44. Tier 2-4 map bosses now give a Pandemonium key 35% / 50% / 75% (25% before), Rathma and Lucion a Tier 5 map 50% (25% before).
Confirmed	Fixed some outdated information on the endgame maps page.	docs/endgame_maps.htm changed (-477 bytes): item names corrected (Mephisto's Demonic Brain, Baal's Demonic Eye, Lucion's Relic of Sanctification), and the paragraph on terrorized maps and tier 5 shards was removed.
Confirmed	Fixed a lot of dragon stoning bugs.	cubemain.txt: D-stoning rows grow from 223 to 344. Caps now land on round numbers: Attack Speed and Cast Rate 121 → 120, Attack Rating and damage vs demons/undead 504 → 500, Crushing Blow and Deadly Strike 102 → 100, Light Radius 12 → 10, Magic Damage Reduced 48 → 45.
Confirmed	Fixed a bug where ancient scrolls could not be downgraded.	cubemain.txt rows "Scroll Downgrade 2".."Scroll Downgrade 50" are enabled at 3.3.03 (blank at 3.3.02): one scroll in, the scroll one number lower out. Not tested in game.
Confirmed	Fixed a few documentation errors.	docs/runewords.htm: Gold Scarab rows (5-6 Socket) and (6 Socket) move from +50% to +25% item quantity, as runes.txt always had. docs/specializations.htm: Transmutation 50% → 25%, Unstable Mixtures 15% → 10%, matching the files. docs/Eastern Sun Resurrected Cube Recipes.html and docs/vessel_of_souls.htm also changed.

Verdict	Patch note says	Files show
Not checkable	Fixed a few cube recipe bugs.	The line names no recipe. cubemain.txt changes heavily (23,694 → 22,154 rows, 740 added, 2,280 removed, 861 changed), so individual fixes cannot be matched to it. Examples found: Celestial Blade weapon mastery awaken row takes 0be instead of 0bs; Token of Absolution x2 and x3 rows added.

Stash

Verdict	Patch note says	Files show
Confirmed	Added all ancient artefacts to the currency stash tab.	data/global/ui/layouts/bankexpansionlayouthd.json (+65 lines) and its controller copy add slots for aa1-aa5; the consumables stash panel sprites changed.

Archaeology

Verdict	Patch note says	Files show
Confirmed	Power Overwhelming - Gemwords can no longer be made into magic items.	d2rloader/config/celestialrayone.archaeology.toml [magic_runewords] adds exclude_ingredient_types = ["gem"].

Cube Recipes

Verdict	Patch note says	Files show
Confirmed	You can no longer add sockets to magic items the regular way if you have “Power Overwhelming” perk (to avoid missocketing).	cubemain.txt rows at 16480-16485 (regular magic item socketing) now carry op 6, param 988, value 0: they need the character not to have the perk.
Confirmed	Recipes that rerolled charms now output a charm of the same type.	cubemain.txt "Magic Charm" and "Rare Charm" reroll rows are now per charm type, with the output type matching the input.

Amazon

Verdict	Patch note says	Files show
Confirmed	Athulua’s Wisdom - Now starts with 10% to all speeds.	skills.txt Wisdom of Athulua passivecalc1-5 each gain +10 (run speed, hit recovery, block rate, cast rate, attack speed).

Changed in the files, not in the patch notes

Change	Evidence	Player-visible
Ten dagger uniques reworked: Requier's Skill, The Golden Spike, Sirian's Infinite Knives, Trang'Oul's Claw, Wizardspike, Throatslitter, The Horn of Balor, Rathma's Blade, Famine, Mordenkainen's Dagger	uniqueitems.txt 10 changed rows (for example Requier's Skill loses dmg%; Throatslitter gains weapon-mastery-ninja-to); new skills Horn of Balor Aura and Famine Dagger Buff, stat faminedagger, strings hornofbalordesc and faminedaggerdesc.	Yes
Larzuk refuses every charm	New plugin larzuk-restrictions, celestialrayone.larzuk-restrictions.toml refused_item_types = ["char"]; "his socket reward is not used up".	Yes
Small and Grand Charms can hold one socket	misc.txt Small Charm and Grand Charm hasinv and gemapplytype 0 → 1; itemtypes.txt Small Charm and Large Charm MaxSockets1-3 0 → 1.	Yes

Change	Evidence	Player-visible
Op 1 stats on items now reach the character	New plugin op-1-item-fix, celestialrayone.op1-item-fix.toml; affects passive_summ_mastery_total on items.	Yes
Corruption bricks always give a rare item	cubemain.txt: one brick row per slot with output usetype,rar. At 3.3.02 crafted, low, normal and superior bricks kept their quality.	Yes
Vessel of Souls stores its anointment and applies it on transform	cubemain.txt: 178 "Anointment - Vessel of Souls" rows removed; tier 4 row sets anointed_dummy 200; 29 "Vessel of Souls Transform to Mythical ... - Anointed" rows roll that weapon type's normal pool. docs/vessel_of_souls.htm says the same.	Yes
Rune forging for orbs and the Mythical Arcane Staff	cubemain.txt new rows "Rune Forging orb" (45) and "Rune Forging Mythical Arcane Staff" (45).	Yes
Token of Absolution x2 and x3	cubemain.txt two new rows; the Cube Recipes page lists 4/8/12 Dragon Stones.	Yes

Official pages behind the files

- `docs/endgame_maps.htm`: Tier 4 map bosses (Baal's Disfigured Harbinger of Destruction, Arbiter of Souls): Pandemonium key 100% on the page, 75% in the files.
- `docs/Eastern Sun Resurrected Cube Recipes.html`: Holy Symbol D-stoning on armor, helm and shield: page 150, files 100. Forging Hammer on a weapon: page cap 500, files have no cap.

Not checked

- Nothing was tested in game.
- Seven plugin binaries changed or were added (bad-item-log-crash-fix, blacksmith, jeweler, larzuk-restrictions, monster-affixes, op-1-item-fix, summon-enhancements). Only their sizes and config files were compared. The loot filter plugin is unchanged.
- The individual cube recipe fixes behind "a few cube recipe bugs" were not matched row by row.
